

Some might call it
an obsession
with particulates.
We prefer to call it
a commitment.

The world leader in ambient gas is now into particulates. And that's big news. Because we're committed to advancing the science – continually improving your ability to detect, measure and analyze particulates in the air.

Now you have the world's foremost resource for real-time particulates reshaping your capabilities. As we continue to sharpen our focus and commit resources to this important area, you'll be better able to understand, control and regulate particulates. Faster and more easily than ever.

Visit www.thermo.com/air or call toll-free 866-282-0430 to see what we mean. Are we committed? Absolutely. Obsessed? Maybe. But when it comes to accurate, real-time measurement, what's wrong with that?
