

Now you can have
simple, accurate, precise
particulate monitoring.

At any time resolution.

Now you can have continuous, real-time accuracy and precision when monitoring particulates, with unprecedented ease, using the SHARP (Synchronized Hybrid Ambient Real-Time Particulate) monitor from Thermo. This unique instrument combines nephelometry and beta attenuation sensing technologies for fast, accurate readings that are highly time resolved. Intelligent RH control and frequent filter changes eliminate water vapor without loss of volatile organic compounds. And you can spend more time – approximately 96%, in fact – capturing data.

And while the SHARP monitor is new, the technologies inside are nothing new to Thermo. We've been a leader in nephelometry as well as beta attenuation sensing techniques for decades. Factor in our strengthened service organization, and the combination grows even better. The ideal monitor, backed by the right people – for the best of all worlds.

Visit www.thermo.com/air or call toll-free 866-282-0430. And get accurate particulate monitoring, however long or short the period.

Analyze • Detect • Measure • Control™
