**DEALER MANAGEMENT LETTER**

DML: # 14-07G

**Subject:** Discontinue of 1500 Series Spare Parts

Dear Valued Customer,

Thermo Fisher Scientific will discontinue the support of the Orion 1500 Series effective July 1<sup>st</sup>, 2007.

Thermo Scientific has provided spares support of the 1500 series monitors for over 15 years. The obsolescence is a result of many factors including cost of raw materials from suppliers, extensive lead time delivery on special order components, as well as the difficulty in providing older electrical components in a timely manner. For these reasons we have been forced to obsolete the associated spare parts to support the following 1500 Series Monitors.

Please refer to the cross reference chart below to find the suitable replacement monitor catalog number. For more information on each of these monitors please visit us at [www.thermo.com/water](http://www.thermo.com/water).

Obsolete Thermo Cat. No.	New Thermo Cat. No.	Description
1517	1817LL	Orion Low Level Chloride Monitor
1511	2111LL or 2111XP	Orion Low Level Sodium Monitors
1518	1818AO	Orion Hydrazine Monitor
1520	1820AO	Orion Calcium Hardness Monitor

Thermo Scientific appreciates your continued support and commitment to the Orion Process Products. If you have any technical questions or concerns please feel free to contact your local Thermo distribution representative or contact Customer Support for Orion products at 800-225-1480 or [www.thermo.com/water](http://www.thermo.com/water)

Best,

Erin White

Senior Product Manager
