

Obsolescence Notice

Model 440 and 440A Opacity Monitor and Remote Display Model 51C Total Hydrocarbon Analyzer

May 21, 2007

Thermo Fisher Scientific announces the discontinuation of the Model 440 Opacity Monitor and the Model 440A Remote Display effective immediately. Many of the components for these items have become very difficult to obtain and because of this it is no longer possible to build them in a timely manner.

The Model 440 has a direct replacement in the Model 445 Opacity Monitor.

Thermo Fisher will continue to support those units in the field with spare parts* and service until May 30, 2015.

Thermo Fisher Scientific also announces today the discontinuation of the Model 51C effective May 30, 2008.

This "C" Series analyzer will be replaced with the Model 51i.

As with all "C" Series analyzers, spare parts* and service will be available until August 1, 2015.

Sincerely,

Frank Duckett
